- Direct Injectors (17-'s)

Up to 5 days:

- Carburetors
- MPFI Throttle Bodies (14-'s)
- Throttle Body Injection (FI's)
- Distributors

The R & R Process:

Step 1. Ship us your Cores. Ship to our Winnipeg Plant: **675 Golspie Street, Winnipeg, MB R2K 2V2, CA**

Step 2. Verifying the unit. The unit will be checked to verify if it is **Reman worthy**. At this point the actual R & R price can be confirmed. Coded units will have the same price as that of a regular AutoLine part number. Uncoded units' price will be determined based on the parts needed plus the labor time.

Step 3. Production/Building Process. Using a "**Reverse Engineering**", the process includes dismantling of every component of the unit, replacing all the defective parts, changing the bushings/O-rings/seals and making sure that all moving parts are working properly.

Step 4. Testing & Quality Control. After all the meticulous processes, the unit will undergo a series of testing to guarantee the quality of the product, as well as its dependability and performance.

Step 5. Packaging/Shipping. The unit is now ready to be packed and will be shipped back to the customer.
